is known for her police procedural novels. Her series inspector Barbara Havers has solved more than 1,000 cases and won
awards from the CWA and the CILIP, among others. Today, we bring you her first short story from 1948, a dark, creepy tale
that will leave you asking: What's going to happen to Barbara? III

What's New In AutoCAD?

Modular Section Styles: Create your own section styles to help you work efficiently in different sections of the same drawing.
Anchor templates: Always choose from a range of selection and annotation tools that you've created. Select a template, and
AutoCAD will automatically choose a default color and annotation, without you having to select them. Fully customizable
annotation colors: Put your stamp on the annotation colors you use with layers. By customizing the colors, you can make sure
that your annotations look great across your entire design, and you'll never see the same color again. Import Layer and Cut
Path.dwg files: Do more with a pre-existing.dwg file. Import it directly into your current drawing. With this feature, you can
apply colors, annotations, and more without opening the file in a separate application. See your labels, too: Customize the label
font and color of your annotations. With this feature, you can view and edit all the labels created with your newly imported
annotations. Choose from a wide variety of predefined color schemes and layer styles: Get help with your colors and layer
styles. Use the new color and style palette to make sure that you choose the right colors and styles for your designs. Use the
color and style pane to import colors and styles from within any drawing, not just your currently open drawings. (video: 1:20
min.) Fully customizable color panel: Make sure that you always see the right colors and styles for your drawings. With this
feature, you can quickly customize the look of the color panel to make sure that you always have the right colors and styles
available. See your layers, too: Adjust your working environment to match your design style. You can set the appearance of the
ruler, grid, scale, marquee, and properties panel so that they match your color scheme. Link points together for workflows:
Forget about complex and confusing configuration settings. Link your objects together for simplified workflows that save you
time. (video: 1:25 min.) A new Layer Style Editor: The Layer Style Editor allows you to control how objects are filled or
shadowed, whether or not shadows are additive, and how any shadows overlap. See your labels, too: The Label tab allows you to
customize the font, style, and color
